DETAILED ACTION

1. This Office action is in response to Applicant's amendment, filed on 03/30/2004.

2. Claims 1-42 are pending.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

4. Claims 1-42 are rejected under 35 U.S.C. 103 (a) as being unpatentable over Ogasawara (U.S. Pat. No. 6,386,450) and Cerf et al. (U.S. Pat. No. 6,418,138) and Ogasawara (U.S. pat. No. 6,513,015) in view of Ollikainen et al (U.S. Pat. No. 6,377,981).

As per claims 1, 3-6, 8-12, 15-28, 30-34 and 36-42 Ogasawara discloses an electronic personal shopping system, communicating between a store computer and a mobile terminal, for organizing a consumer's movement through a retail facility in accordance with the consumer's current location (a method for public wireless network access), the method comprising the steps of:

Art Unit: 3621

detecting the presence of a local Area Network (LAN) by at least one mobile device at a LAN location, the detected LAN providing wireless network access to a global data network with at least one mobile device at a location (see., abstract, col 1, lines 12-17, col 3, lines 42-52, please note that col 5, lines 47-67, and col 6, lines 1-15 show a LAN that can be connected to the mobile terminal). It is to be noted that Ogasawara fails to explicitly disclose the process of requesting identification information from the at least one mobile device through a node of the LAN, sending the requested user identification information from the at least one mobile device to the access node of the LAN, the user identification information including personal and demographic information about a user of the at least one mobile device, sending the demographic information about the users of the at least one mobile device to an advertising server, providing access to the global communication data network through a gateway of the LAN to the at least one mobile device in response to receiving the demographic information about the user of the at least one mobile device by the advertising server from the access node of the LAN, accessing the global communication data network through a gateway of the LAN with the at least one mobile device, receiving commercial messages through the gateway from the advertising server, the commercial messages being selected based on the demographic information of the users, sending the commercial messages to a display at the location for viewing by the users. Cerf discloses requesting identification information from the at least one mobile device through a node of the LAN (see., abstract, , col 3, lines 12-34, the gateway or proxy server is capable of identifying information, (see., abstract, col 2, lines 35-45, col 4, lines 51-67, col 3, lines 37-59, col 5, lines 45-56, col 4, Application/Control Number: 09/750,772

Art Unit: 3621

lines 51-67, col 5, lines 45-56, col 3, lines 11-27, col 3, lines 11-27, and col 1, lines 12-65, col 3, lines 37-59).

It is to be noted that Cerf fails to explicitly disclose the step of_receiving the demographic information_about the user of at least one mobile device. However, Ogasawara discloses an electronic shopping that provides for customer recognition using wireless identification. A customer ID card is further useful in assisting each customer in making purchase transactions. The customer ID card is used in connection with a customer assistance which is able to develop and display various personalized assistance recommendations based on an analysis of demographic and mobile terminals (see., abstract wherein said customer's demographic profile, col 3, lines 50-67, col 4, lines 1-33, col 5, lines 17-37). Therefore, it would have been obvious to a person of ordinary skill in the art at the time the invention was made to modify the teachings of Ogasawara and Cerf by including the limitation detailed above as taught by Ogasawara "015 because this would provide the benefit of determining that a particular customer has made any purchases of items based upon the customer ID.

Ogasawara, Cerf and Ogasawara "015 fail to disclose the steps of receiving commercial messages from the advertising server, the commercial messages being selected based on the forwarded demographic information of each of the users provided with the access to the communication data network; and display the received commercial messages on at least one display at the LAN location for viewing by all persons at said LAN location. Ollikainen discloses a modular digital data communication cyberstation that is a modular computer and server

that is external to the personal computers to which data is to be distributed. The cyberstation receives, optionally stores (commercial messages and advertising), and distributes the broadcast and interactive data to the personal computers. An optional pass-through television interface may be used to display (displaying commercial messages and advertising) the broadcast data on a television receiver (see., abstract, fig 1, col 1, lines 40-65, col 2, lines 39-67, col 3, lines 1-67, col 4, lines 1-67).

It would have been obvious to a person of ordinary skill in the art at the time the invention was made to modify the teachings of Ogasawara, Cerf, and Ogasawara "015 by including the limitation detailed above as taught by Ollikainen because this would provide the benefit of presenting or displaying messages and advertising to a particular customer has made any purchases of items based upon the customer ID.

As per claims 2, 7, 13, 14, 29 and 35 Cerf discloses the claimed method, wherein the advertising server is managed by an advertising service (see., col 3, lines 37-59, col 5, lines 45-56).

RESPONSE TO ARGUMENTS

5. Applicant's arguments filed on 03/30/2004 have been fully considered but they are most in view of new ground (s) of rejection.

Application/Control Number: 09/750,772 Page 6

Art Unit: 3621

Conclusion

6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Pierre E. Elisca whose telephone number is 703 305-3987. The examiner can normally be reached on 6:30 to 5:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, James Trammell can be reached on 703 305-9769. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
